Detailed Action

Examiners Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Melvin Kraus on 1-15-2004. The changes made below are underlined.

The Claims are amended as follows

-- 12. (currently amended) A defect inspection apparatus for detecting defects in microscopic patterns formed on an object to be inspected, with using an ultraviolet laser ray, comprising:

an ultraviolet laser-generating device which emits an ultraviolet laser ray as defined in Claim 1;

an illumination optical system for irradiating the ultraviolet laser ray emitted from said ultraviolet laser-generating device upon the object through a coherence reduction optical system, a polarized beam splitter and a group of polarizer elements and an objective lens;

an optical system for forming an optical image of said object, which is

illuminated by said illumination optical system;

a photoelectric converter for converting the optical image, which is formed by said optical system, into a signal upon receipt thereof; and

a defect detection circuit for detecting the defect on said test object upon basis of the signal obtained from said photoelectric converter. --

-- 19. (currently amended) A method for inspecting defects in microscopic patterns formed on an object to be inspected, with using an ultraviolet laser ray, comprising the following steps:

generating an ultraviolet laser ray, utilizing an ultraviolet laser generating device as recited in Claim 1;

illuminating the object with the ultraviolet laser ray through a coherence reduction optical system, a polarized beam splitter and a group of polarizer elements and an objective lens;

forming an optical image of the object from light obtained in said illuminating step;

converting the optical image obtained in said forming step into a signal upon receipt thereof; and

detecting the defect on said object upon basis of the signal obtained in said converting step. --

2. Claims 3, 13, 14, and 17 are cancelled

Examiner's statement of reasons for allowance

The following is an examiner's statement of reasons for allowance:

3. Claims 1,2, and 4-11 were allowed in the previous Office Action.

4. Amended Claims 12, and 19 are allowed because Prior art fails to show a defect inspection apparatus that utilizes an ultraviolet laser generating device housed in a hermetically sealed container that provides particulate contamination control of the output beam, as defined in Claim 1.

Claims 15 and 16 are allowed because they are dependent upon allowed amended Claim 12.

Claims 18 and 20 are allowed because they are dependent upon allowed Claims 1 and 8 respectively

Prior Art does not specifically disclose a defect inspection system that utilizes a laser light source in a hermitically sealed container. The use of a hermetically sealed container to reduce particulate contamination of a defect inspection systems ultraviolet laser source is patentable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
